Towards game changing sustainable impact: Awareness-based education and co-creation

Time: Wed 13 March 10-12, Place: Väre, Otaniementie 14, F102

Inner dimension of sustainability has a major role in transitioning towards life-positive futures. This means acknowledging the effect emotions and habits-of-mind have on learning and action, in order to catalyze rapid and large-scale systems change. Without recognizing and activating conscious human agency, all the detailed roadmaps, pathways and sustainability goals may just lead to a dead end.

This seminar concentrates on personal experiences and joint discussions with the aim of providing the participants concrete and inspirational takeaways on how to apply the awareness-based approach into their own work, teaching environment and research.
