

# Energy Technology

The Master's Programme in Energy Technology (EEN) is organized by the School of Engineering. It offers students both a strong basic education within the field of energy technology as well as further specialisation opportunities in three subject areas: Heat and Power Processes; Energy Systems for Industry and Communities; and Building Energy and HVAC Technology. The last intake to the programme took place in autumn 2016.

Courses of the Master's Programme in Energy Technology are included in the majors of the Master's programme in [Advanced Energy Solutions](#). The programme started in the autumn 2017. We recommend that students graduate from the degree programme which they currently have a study right in. Even if the Master's Programme in Energy Technology does not have an intake after autumn 2016, most of the courses are still organized as part of the new programme.
