

# Functional Materials

**Code:** CHEM3034

**Extent:** 20–25 cr

**Language:** English

**Professor in charge:** Sami Franssila

**Target group:** Master's students

**Application procedure:** Open for all students of Aalto University.

**Quotas and restrictions:** Please note, that in some courses the number of participants can be limited. Then major students (Functional Materials) have the priority.

**Prerequisites:** While making your study plan, you should verify that you have the prerequisites needed for the courses.

## Learning outcomes

After Functional Materials minor program student can:

1. Explain solid state structure and phenomena, including mechanical, electrical, magnetic, optical, thermal behaviour of metals, polymers, ceramics and composites
2. Evaluate material properties of metals, ceramics, polymers, composites, biomaterials and nanomaterials
3. Design new materials and predict their behaviour
4. Understand the engineering possibilities and limitations of new materials

## Content and structure of the minor

For the minor (20–25 credits) all students have to take the same compulsory studies of 10 cr. Additionally the student needs to select 2–3 courses (10–15 cr) from Functional Materials major's courses. Please check the list below and major's content.

### Structure of the minor

Code	Name	Credits	Period
Mandatory courses		10	
<a href="#">CHEM-E5100</a>	Solid State Materials and Phenomena	5	I
<a href="#">CHEM-E5120</a>	Interfaces and Nanomaterials	5	I
Elective courses		10-15	
Choose 2–3 courses from the list below
